OPERATING MANUAL & USER GUIDE

INCURSION

Automated, Explainable & Tunable Hackathon Team Recruitment

A step-by-step visual handbook designed for organizers and judges who are using Incursion for the first time. Learn exactly how to upload candidate datasets, audit GitHub velocity, review candidate resumes, customize scoring rules, drill into squad telemetry, compare borderline teams, and export certified shortlist reports.

THE 5-STEP ORGANIZER RECRUITMENT JOURNEY

STEP 01	STEP 02	STEP 03	STEP 04	STEP 05
Intake Cohort	**Review Leaderboard**	**Tune Rules & Cutoff**	**Inspect & Compare**	**Export PDF Audit**
Drop CSV, Excel, or Google Sheet	Check live ranks & qualification status	Adjust Top X & 5 scoring sliders	Radar skill coverage & head-to-head	1-click CSV & executive dossier

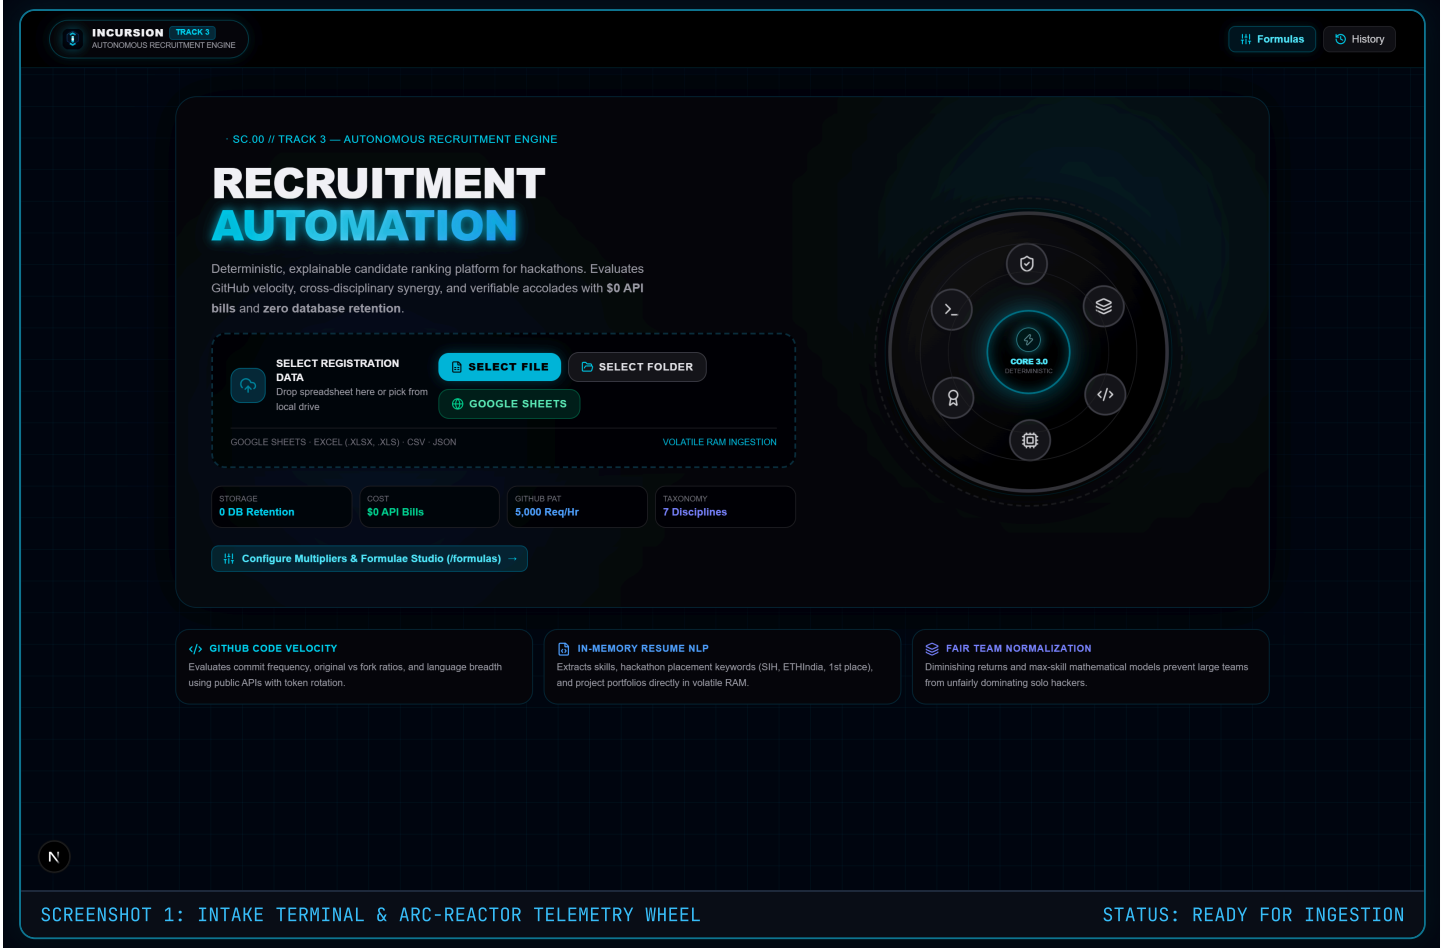

WHAT MAKES INCURSION UNIQUE? (EXECUTIVE SUMMARY)

RECRUITMENT DIMENSION	WHAT INCURSION AUTOMATES FOR YOU	ORGANIZER ADVANTAGE
Universal File Intake	Ingests CSV, JSON, Excel (.xlsx/.xls) & Live Google Sheets directly.	`Zero Setup` No format conversion needed.
Live GitHub Velocity	Audits public repos, commits, stars, languages & flags fork-padding.	`Anti-Cheat` Real code verification.
Resume Intelligence	Extracts skills, hackathon wins (SIH, ETHIndia) & portfolio links in RAM.	`Cloud + PDF` Auto-syncs Google Drive resumes.
Role Synergy & Gaps	Checks balance across Frontend, Backend, AI/ML, DevOps, and Design.	`Balanced Squads` Highlights missing disciplines.
Zero-DB Privacy	100% client-side memory execution; state saved safely in browser localStorage.	`Zero Liability` No data leaks, no GDPR issues.

Beginner Tip: You don't need any technical coding background or API keys to use Incursion! The system comes pre-configured with industry-standard hackathon selection formulas. Simply drop your registration spreadsheet and watch the leaderboard populate instantly.

STAGE 1 The Intake Terminal: Loading Candidate Cohorts

When you open Incursion, you are greeted by the Cyber Terminal and planetary Arc-Reactor telemetry wheel. Here is where you feed your event registrations into the system.

SCREENSHOT 1: INTAKE TERMINAL & ARC-REACTOR TELEMETRY WHEEL — STATUS: READY FOR INGESTION

1 Central File Drop Zone

Drag and drop any registration file directly onto the cyan target area. Supports **CSV, TSV, JSON, Excel (.xlsx, .xls)** exported from Google Forms, Devpost, Typeform, or Tally.

2 Select File & Select Folder Buttons

Click **"Select File"** to choose a single spreadsheet, or **"Select Folder"** to choose a folder containing both your registration CSV *and* candidate PDF resumes for simultaneous auto-matching!

3 Google Sheets Live URL Drawer

Click **"Google Sheets Link"** to paste a public Google Sheets URL. Incursion downloads and normalizes the sheet automatically through its built-in CORS bypass tunnel.

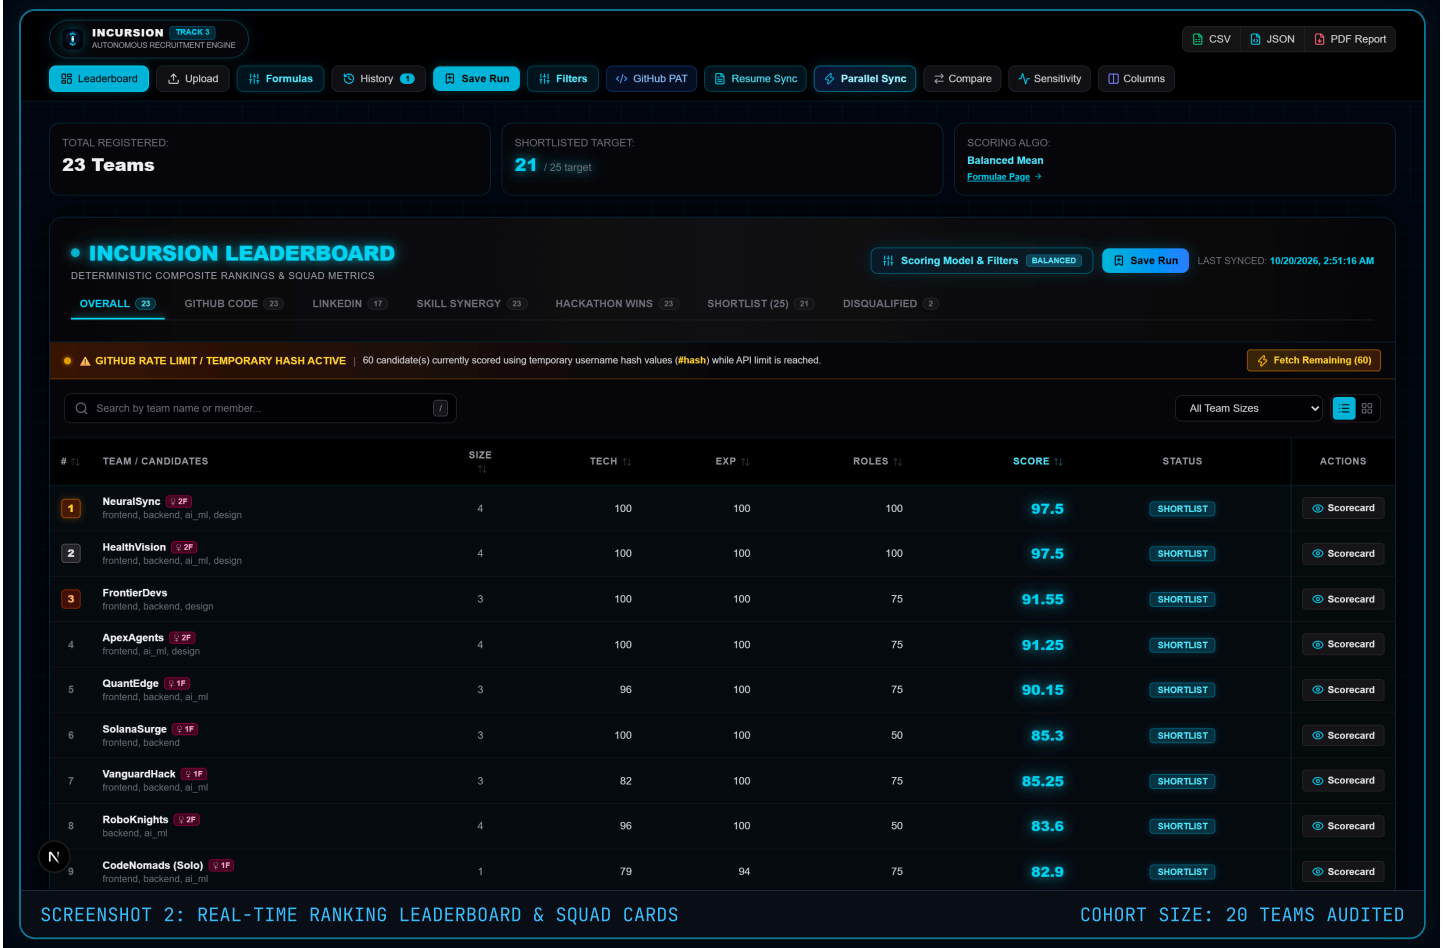

4 Arc-Reactor Telemetry Nodes

Interactive orbiting nodes display Incursion's active evaluation engines: Full Stack, AI & Data, Accolades, GitHub Velocity, Zero-DB Privacy, and Synergy Normalization.

What Happens Next: Once dropped, Incursion automatically scans header names (Team Name, Member 1 Name, GitHub, Resume, etc.), groups teammates into unified squads, calculates preliminary scores, and takes you straight to the Live Leaderboard!

STAGE 2 The Executive Leaderboard & Cohort Telemetry

Once your file is loaded, the main dashboard opens immediately. Teams are dynamically ranked from #1 to #N based on composite multi-dimensional scores.

SCREENSHOT 2: REAL-TIME RANKING LEADERBOARD & SQUAD CARDS — COHORT SIZE: 20 TEAMS AUDITED

1 Rank Badge & Cutoff Line

Teams above the configured cutoff (e.g., Top 10) display glowing cyan badges (#1, #2...). A prominent divider clearly marks the boundary between **Qualified Candidates** and **Waitlisted Teams**.

2 Composite Score (0-100)

The large numerical score on each card represents the team's overall score. Hovering over the mini dimension bars shows individual scores for **Technical Output, Experience, Synergy, and LinkedIn**.

3 Eligibility Status Pills

- QUALIFIED: Passed all rules and ranked inside Top X.
- WAITLISTED: Passed all rules but fell outside Top X.
- DISQUALIFIED: Failed team size or diversity constraints.

4 Filter Tabs & Quick Search

Switch views with one click: **OVERALL, GITHUB, LINKEDIN, ROLES, ACCOLADES, SHORTLIST, DISQUALIFIED**. Use the live search bar to find teams by name, member, or skill.

QUICK ACTION BAR (TOP RIGHT OF DASHBOARD)

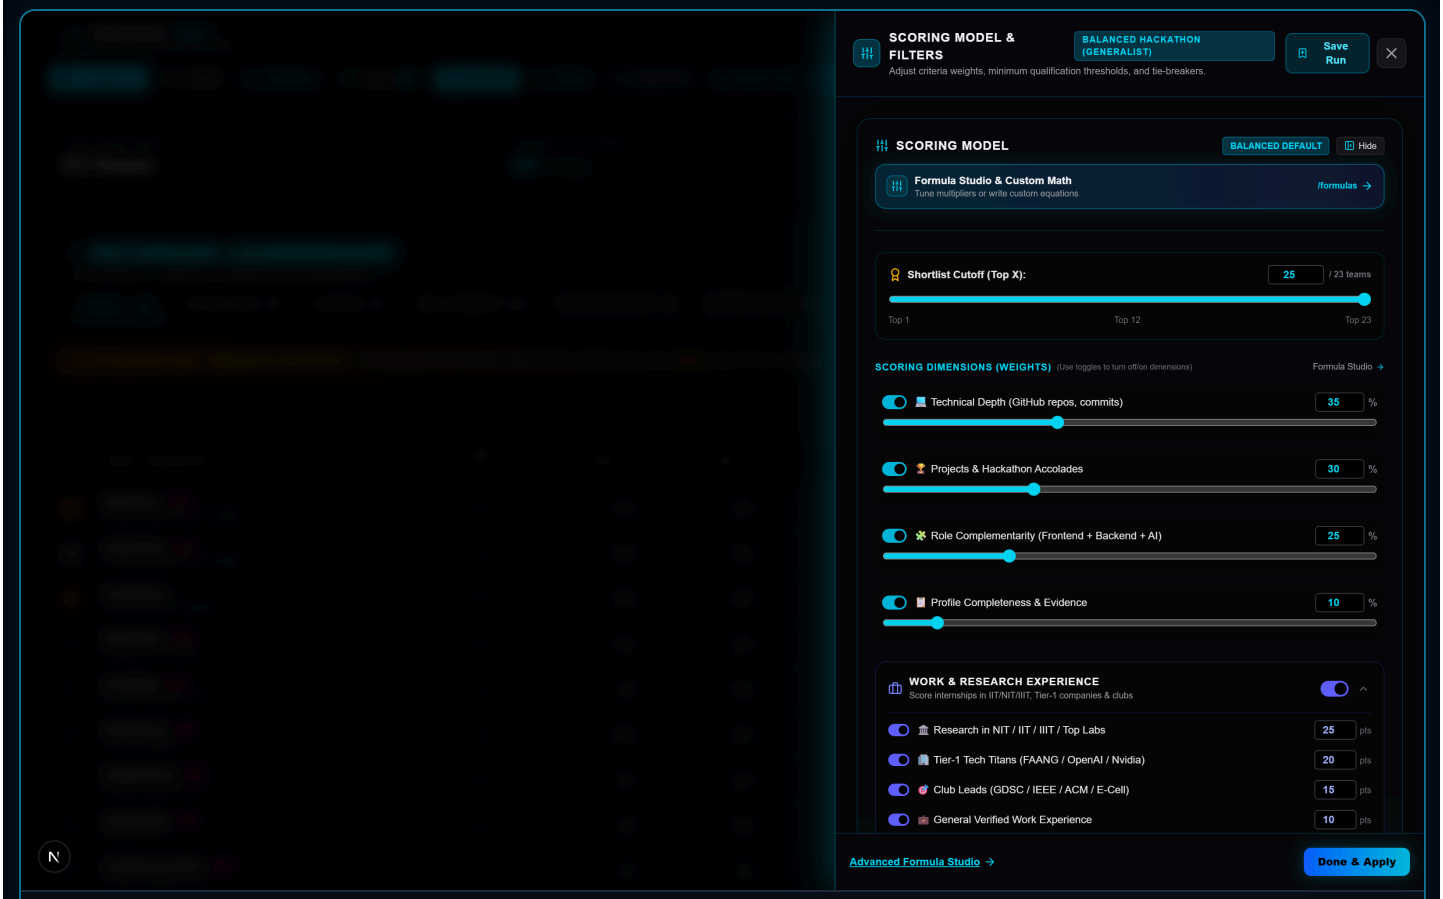

🔵 **Weights & Rules:** Open the constraint settings drawer.

⚖️ **Compare:** Launch side-by-side squad comparison.

📄 **PDF Export:** Download official executive audit report.

STAGE 3 Recruitment Constraints & Weight Tuning Drawer

Every hackathon has different priorities. Click **"Weights & Rules"** in the top navigation bar or dashboard to open the side drawer and customize your rules.

SCREENSHOT 3: SLIDING RECRUITMENT RULES & WEIGHTS CONTROLS — TWO-WAY SYNCHRONIZED INPUTS

1 Target Shortlist Capacity (Top X)

Set exactly how many teams you want to qualify (e.g. 10, 25, 50). You can either drag the slider or type the exact number in the synchronized number box. The cutoff updates across the entire leaderboard instantly!

2 Hard Eligibility Gates

Min/Max Team Size: Enforce strict squad limits (e.g. 2 to 4 members).
Gender Diversity: Require at least 1 female team member. Teams failing gates are automatically marked as Disqualified with explanatory tags.

3 5-Dimension Scoring Sliders

Tune the relative importance of:
- **Technical Depth (GitHub)** (Default: 40%)
- **Experience & Accolades (Resumes)** (Default: 30%)
- **Role Synergy & Balance** (Default: 20%)
- **LinkedIn Pedigree & Seniority** (Default: 10%)

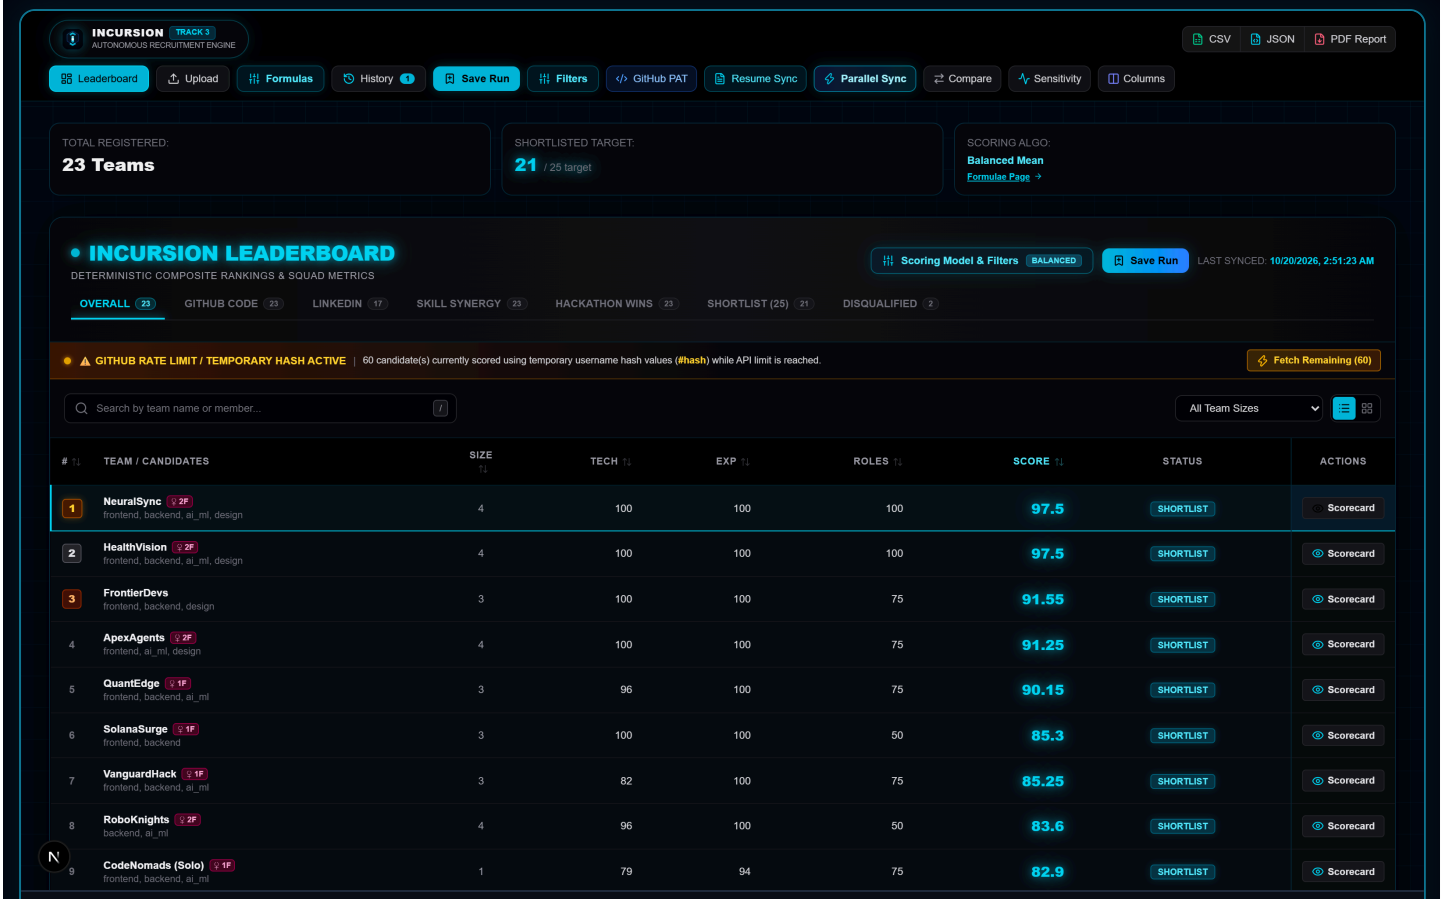

4 One-Click Philosophy Presets

Don't want to adjust sliders manually? Click preset buttons to switch recruitment philosophy in 1 second:
- **Balanced Hackathon** (Default generalist)
- **Code & Hard Tech Heavy** (Prioritizes GitHub)
- **Experience & Accolade Heavy** (Prioritizes SIH/ETHIndia wins)

⚠️ **Two-Way Input Feature:** Notice that every slider has an editable numerical box next to it. Whether you drag the bar or type on your keyboard, Incursion stays 100% in sync without needing a "Save" button!

STAGE 4 Squad Telemetry Dossier & Explainability Modal

Want to know exactly *why* a squad received their score? Click **"Inspect Squad"** on any row or click the team name to open their complete multi-page dossier.

SCREENSHOT 4: SQUAD DOSSIER, 6-AXIS RADAR CHART & VERIFIED SIGNALS — SQUAD: NEURALSYNC (#1 OVERALL)

1 6-Axis Skill Radar Chart

Visualizes team balance across **Frontend, Backend, AI/ML, Mobile, DevOps, and UI/UX Design**. Full coverage prevents squads where everyone has the same skill and nobody can build the database or UI.

2 Member Profile Breakdown

Shows every individual candidate in the squad, their verified email, GitHub handle, LinkedIn profile, portfolio link, primary role, and extracted technical skills.

3 Verified GitHub Metrics & Anti-Cheat

Displays real commit counts, repository stars, active languages, and anti-cheat checks. If an account has 100% forks and 0 original commits, Incursion flags it with a red warning badge.

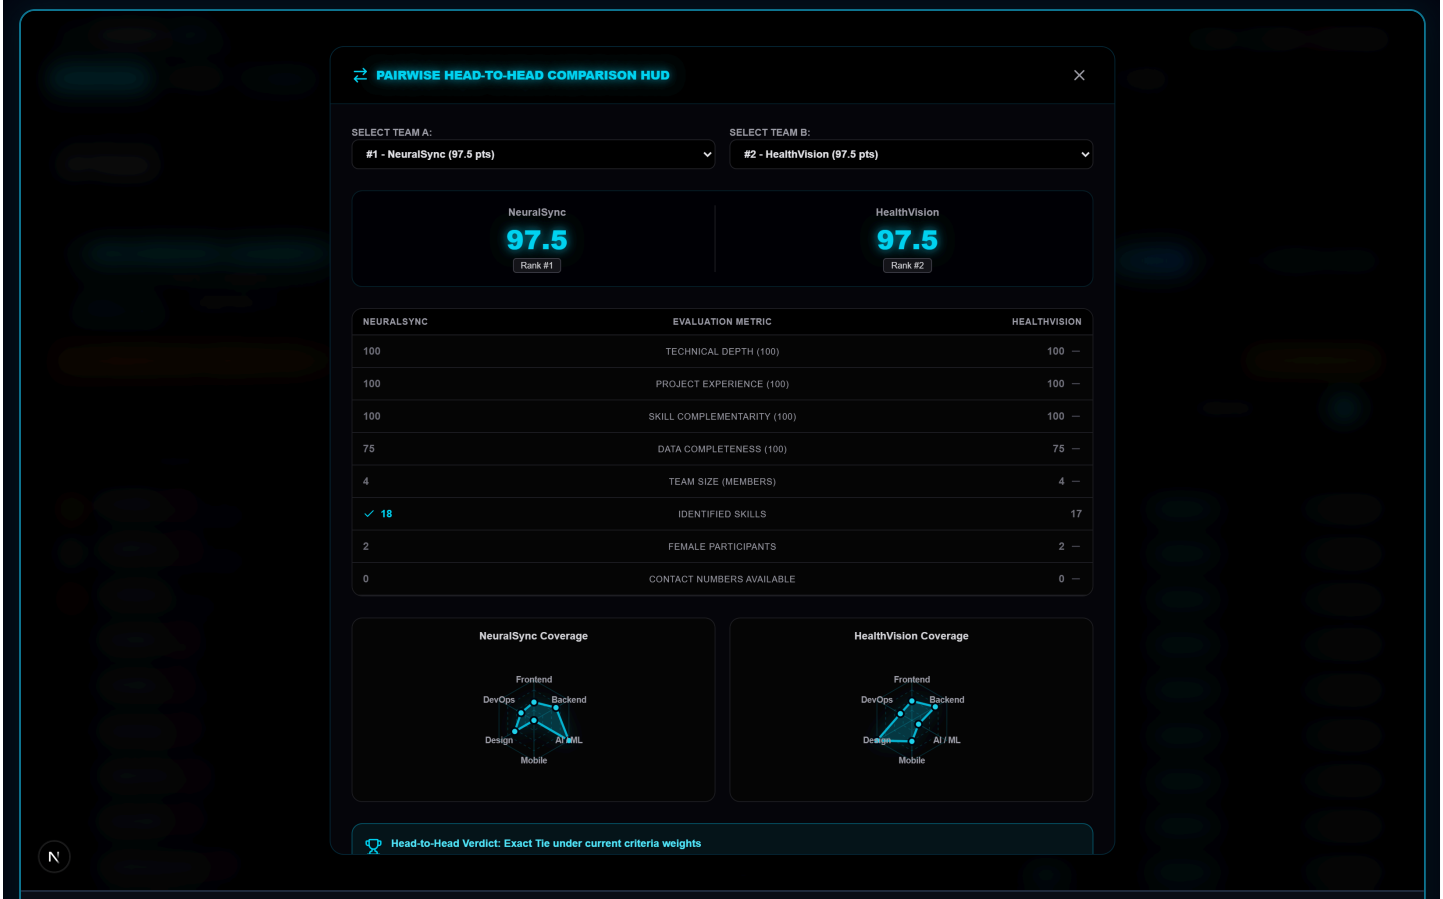

4 Manual Pin & Exclusion Overrides

Organizers have the final say! Click **"Pin Squad"** to guarantee qualification regardless of cutoff, or click **"Exclude Squad"** to disqualify with a custom audit note.

Transparent Explainability: Incursion never acts as a black box. The dossier provides an itemized justification card listing every bonus point earned for hackathon wins, verified portfolios, and role synergies.

STAGE 5 Head-to-Head Pairwise Squad Comparison HUD

When two teams are tied near the shortlist cutoff line, deciding which team gets the last spot can be difficult. Click **"Compare"** in the top navigation bar to launch the Pairwise HUD.

SCREENSHOT 5: SIDE-BY-SIDE METRIC COMPARISON & VERDICT — COMPARING SQUAD A VS SQUAD B

1 Dropdown Squad Selectors

Select any two squads from your cohort (Team A and Team B). You can compare top performers, or compare the 10th and 11th squads sitting directly on the cutoff boundary.

2 Metric-by-Metric Row Comparison

Side-by-side rows compare **Technical Depth, Total Commits, Total Stars, Experience Score, Hackathon Wins, and Synergy Breadth**. The winning team in each category is highlighted with a cyan checkmark.

3 Dual Radar Charts

Direct visual comparison of both teams' skill coverage polygons side-by-side. Spot instantly if Team A lacks design while Team B has full-stack balance.

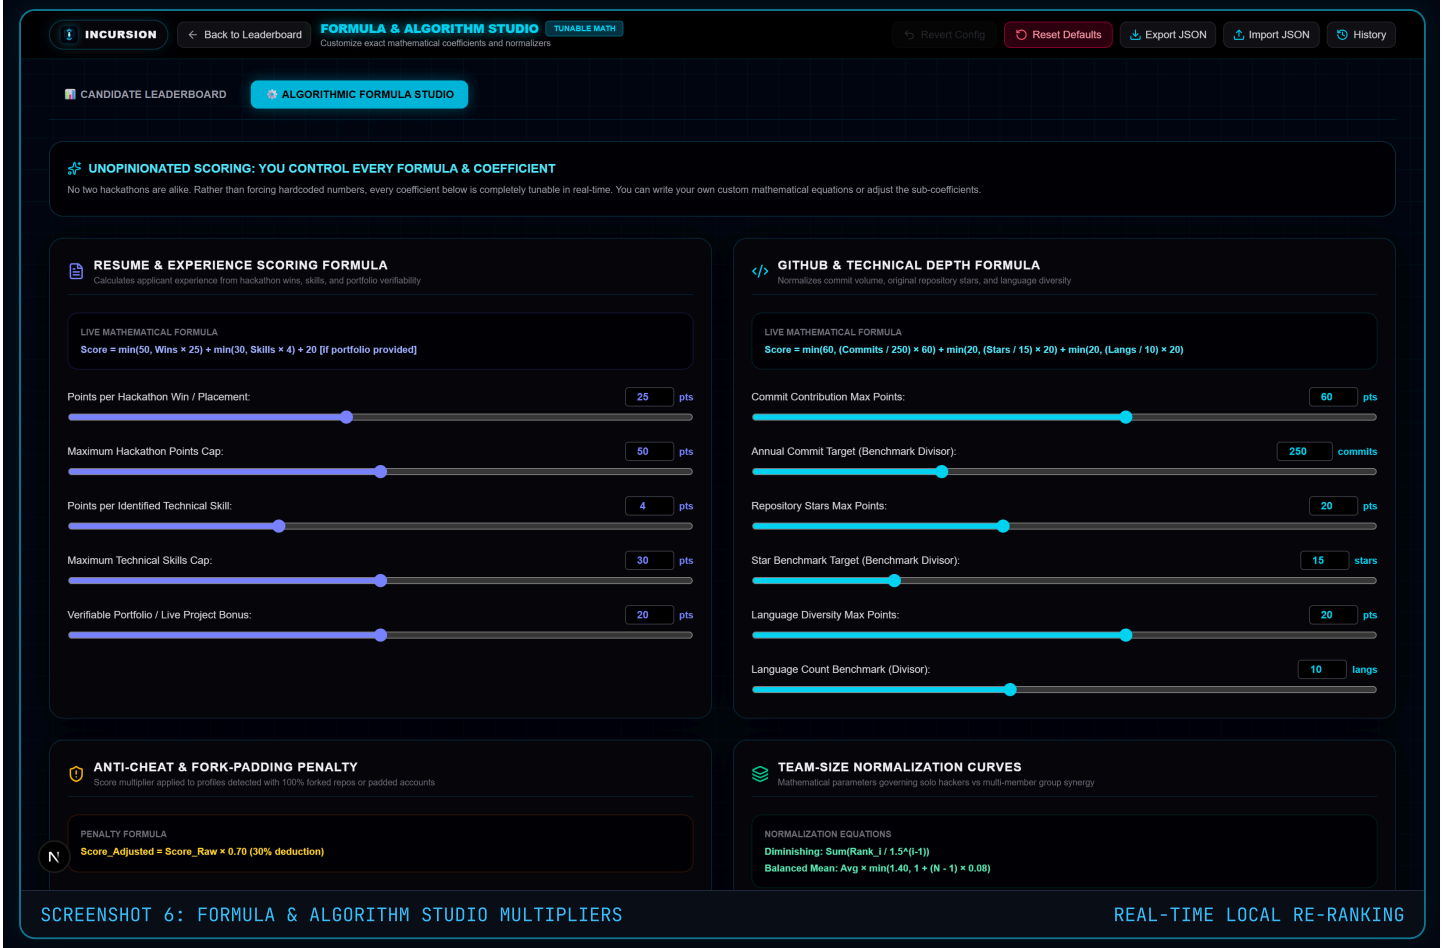

4 Automated Head-to-Head Verdict

Incursion generates an objective, written verdict stating which squad has the competitive advantage under the active criteria weights, including the exact point differential!

⚖️ **Judges' Meeting Tip:** Project the Pairwise Comparison HUD onto the conference room display during jury deliberations to resolve close selection ties with total transparency!

STAGE 6 The Formula & Algorithm Studio (/formulas)

Want to change how many points a hackathon win or a GitHub star is worth? Navigate to the **Formulae Page** via the top navbar link or by visiting `/formulas`.

SCREENSHOT 6: FORMULA & ALGORITHM STUDIO MULTIPLIERS — REAL-TIME LOCAL RE-RANKING

1 GitHub Velocity Multipliers

Tune points allocated per annual commit, points per repository star, and max contribution caps. If your hackathon is beginner-friendly, lower the commit weight so novices aren't penalized.

2 Resume & Accolade Weights

Adjust the bonus points awarded for national hackathon wins (SIH, ETHIndia), verified portfolio links, and technical skill matches found inside PDF resumes.

3 Role Synergy Multipliers

Control the bonus awarded to squads that feature all key disciplines (e.g. at least 1 frontend + 1 backend + 1 designer).

4 Undo & Factory Reset Buttons

Experiment freely! If you don't like your changes, click **"Undo Changes"** to step back, or click **"Reset to Default Formulas"** to restore default settings anytime.

Instant Propagation: Every adjustment in the Formula Studio instantly propagates back to the main leaderboard. When you return to the dashboard, your entire cohort is already re-ranked!

STAGE 7 Exporting Your Shortlist & Generating Audit Reports

Once your recruitment shortlisting is finalized, Incursion provides 1-click export options directly in the top navigation bar.

AVAILABLE EXPORT FORMATS

EXPORT ACTION	FILE FORMAT	BEST USED FOR
Export CSV	`.csv` spreadsheet	Importing final shortlisted team lists into Discord, Slack, mailing lists, or Google Sheets.
Export JSON	`.json` bundle	Backing up your complete scoring configuration, weights, and team records for technical archives.
Download Audit PDF	Executive Multi-Page `.pdf`	Official submission to Hackathon Steering Committees, University Deans, and Corporate Sponsors.

ORGANIZER QUICK-REFERENCE CHEAT SHEET

Q: What if candidate resumes are in a Google Drive folder?
A: Just leave the Google Drive links in your CSV! Click **"Resume Sync"** in the top bar. Incursion's server-side resolver will automatically extract the PDF text streams without CORS issues.

Q: What if candidate GitHub accounts hit rate limits?
A: Incursion handles this automatically! It uses deterministic hash scoring when unauthenticated, or you can add a free personal token in the **"GitHub Sync"** modal for 5,000 requests/hour.

Q: Will my data be lost if I close the browser?
A: No! Incursion automatically persists your active cohort, custom weights, and scoring snapshots in your browser's origin `localStorage`. When you re-open the tab, your leaderboard is right there.

Q: How do I start over with a fresh hackathon cohort?
A: Click **"Home"** or **"Clear Cohort"** on the main landing screen to wipe volatile memory and drop your next dataset.

INCURSION // PLATFORM READY
Built with Next.js 16, TypeScript, Tailwind CSS, unpdf & jsPDF. 100% Zero-Cost Local Intelligence.

HAPPY HACKATHON RECRUITING! 🚀
